## USER BENEFITS

- Tungsten Carbide Tips (TCT): The durable TCT cutting blades are designed for extended tool life and consistent, high-quality cutting performance.
- Brad point centring tip: A sharp, pointed tip in the center of the bit guides it, preventing "walking" at the start of a cut for accurate hole placement.
- External scribing cutters: The bit features two external cutters that score the material's surface, preventing splintering and chipping for cleaner edges.
- Smooth, flat-bottomed holes: The cutting geometry is engineered to produce perfectly flat-bottomed holes, which is essential for properly fitting concealed (Euro-style) hinges.
- Optimal for various materials: It is suitable for drilling in a wide range of wood-based materials, including solid wood, chipboard, plywood, and furniture panels.
- Efficient debris removal: The design helps to effectively clear wood chips and debris from the cutting area, leading to smoother and more efficient drilling.
