

## Circular Saw Blade 305X30 mm D-81979

A tungsten carbide tipped (TCT) circular saw blade designed for fine finishing cuts in a variety of materials.

### TECHNICAL SPECIFICATIONS

Diameter	305 mm
Bore Size	30 mm
Teeth	100
Maximum RPM	5000
Quantity	1 pc

### USER BENEFITS

- Multi-purpose cutting: This blade is designed to cut a wide variety of materials, including non-ferrous metals like aluminum, plastics like PVC, and wood-based panels like chipboard and MDF.
- Triple Chip Ground (TCG) teeth: The teeth are ground with a TCG profile, which reduces splintering and minimizes chipping in delicate materials, ensuring a clean and precise finish.
- High tooth count: The 100-tooth configuration provides a very fine, smooth, and clean cut, which is ideal for joinery, cabinetry, and other applications where a quality finish is required.
- Optimal for larger saws: The 305mm diameter makes it best suited for larger mitre, radial arm, and table saws where a wider cutting capacity is needed.
